REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: the prior art does not anticipate nor render obvious the combination set forth in the independent claims, and specifically does not show an accumulator comprising a body having a space therein, an inlet tube extending downwardly into the body from a predetermined external point at a top of the body and including an end positioned at an inner lower portion of the body, such that a refrigerant flows into the body, an outlet tube extending upwardly into the body from a predetermined external point at a bottom of the body and including an end positioned at an inner upper portion of the body, such that the refrigerant is discharged from the body and at least one heater provided in the body, for heating the refrigerant.

2. U.S. Patent 5,605,058 to Kurachi et al., U.S. Patent 5,551,255 to Rothfleisch and Japanese Patent JP 02154957 to Ko teach an inflow tube delivering the vaporized refrigerant to the accumulator, however this tube is located in the upper inner portion of the accumulator, not the lower inner portion as claimed. The examiner notes that the baffle in Kurachi et al., is specifically high in order to prevent the mixing of liquid and vapor in the outlet, accomplishing the same function as the applicant. The applicant lowers the outlet end of the inflow pipe and sets the inlet end of the outflow pipe very high, which enables the use of a smaller baffle.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
